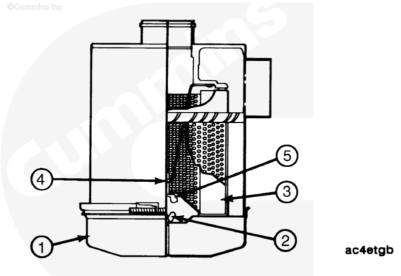
Trainings

Remove

⚠ CAUTION ⚠

Holes, loose-end seals, dented sealing surfaces, corrosion of pipes, and other forms of damage render the cleaner inoperative and require immediate element replacement or engine damage can occur.



Cummins Inc. does **not** recommend cleaning paper-type air cleaner elements. Elements that have been cleaned will clog, and airflow to the engine will be restricted.

Heavy-duty air cleaners combine centrifuge cleaning with element filtering before air enters the engine.

Loosen wing bolt (2), and remove the band clamp securing the dust pan (1).

Remove the dust shield (3) from the dust pan (1).

Clean the dust pan and dust shield.

Remove the wing nut (5) that secures the air cleaner primary element (4) in the air cleaner housing.

Inspect the rubber sealing washer on the wing nut.

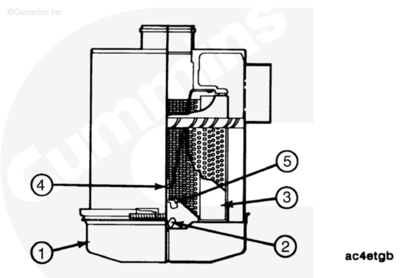
Remove the dirty cleaner element (4).

Install

Install the air cleaner primary element (4) in the air cleaner housing.

Inspect the rubber sealing washer, and make sure it is in place under the wing nut (5).

Tighten the wing nut (5) that secures the primary element (4) in the air cleaner housing.



Assemble the dust shield (3) and the dust pan (4).

Position the dust shield (3) and dust pan (1) to the air cleaner housing, and secure them with band clamp wing bolt (5).

Operate the engine at rated speed and power, and record the intake restriction. Use the following procedure for intake restriction specifications with new filters:
