Maintenance Check

Measure the belt tension in the center span of the pulleys.

Refer to the Procedure 018-005

(</qs3/pubsys2/xml/en/procedures/99/99-018-005.html>)

(Drive Belt Tension Chart) in Section V.

An alternate method (deflection method) can be used to check belt tension by applying 110 N [25 lbf] force between the pulleys on V-belts. If the deflection is more than one belt thickness per foot of pulley center distance, the belt tension **must** be adjusted.

The tension of the fan belt does **not** need measured. The spring loaded idler used on this design maintains the correct belt tension. Refer to Procedure 100-002

(</qs3/pubsys2/xml/en/procedures/18/18-100-002.html>)

(Engine Diagrams) in Section E for location of this component.
