Fault Lamp Sequencing

General Information

The ENGINE FAULT AND MAINTENANCE lamps are illuminated when the keyswitch is turned to the ON position.

After 2 seconds, the red STOP ENGINE lamp will turn off. After an additional 1/2 of a second, the amber CHECK ENGINE lamp will turn off. After an additional 1/2 of a second, the amber ENGINE MAINT lamp will turn off.

The lamps will remain off until a fault is detected.

Note : This is a self-test feature of the lamp wiring and lamps.

Note : The names and colors of the lamps can vary with vessel manufacturer if non-Cummins panels are used.

Engine Fault and Maintenance System Familiarization

The following chart summarizes the different lamps and their operation.

Lamp Operation				
Feature	Operator Message	Engine Maintenance	Stop Engine	Engine Maintenance
Lamp Display	Power-up lamp test	On then off	On then off	On then off
Diagnostics	Fault code flash-out	Flash once/code	Flash code number	
Engine Protection	System problem		Slow flash	
Maintenance Monitor	Interval expired			3x5 fast flash
Maintenance Monitor	Interval rest			3x5 fast flash
Diagnostics	Nonfatal system error	On steady		

Lamp Operation				
Feature	Operator Message	Engine Maintenance	Stop Engine	Engine Maintenance
Diagnostics	Fatal system error		On steady	
Diagnostics	Maintenance required			On steady

If the STOP or CHECK ENG lamp comes on when the engine is running, it means a fault code has been recorded. The lamp will remain on as long as the fault exists. The severity of the fault will determine which lamp is illuminated.

Diagnostic Fault Codes

Stop Engine Lamp

The STOP ENGINE lamp is a red lamp. This lamp indicates that the engine needs to be shut down before permanent damage occurs to the engine.

Note : The engine must be shut off as soon as it can be shut off safely. The engine must not be run until the fault is corrected.

This lamp is also used to flash out the fault code number in the diagnostics mode.

Check Engine Lamp

The CHECK ENGINE lamp comes on during a nonfatal system error. The engine can still be run, but the fault **must** be corrected as soon as possible.

Note : In the diagnostics mode, the CHECK ENGINE lamp completes the three-digit fault code.

Engine Maintenance Lamp

The ENGINE MAINT lamp comes on when engine maintenance is required.

15200044

Wait to Start Lamp

The WAIT TO START lamp is **only** used on engines with an intake air heater system such as C Series engines.

15200051

Engine Diagnostics

When a fault or maintenance lamp is lit, the engine diagnostics switch allows the operator to view the fault codes. The receptacle to the right of the switch is for the technician's computer connection, using either INSITE™ or Echet™ service tool.

Active fault codes can be viewed using the stop engine warning lamp as described below.

13200054

To view the fault codes:

1. The engine **must** be shut off (**not** running).
2. The keyswitch **must** be in the ON position.
3. The ENG DIAG switch (1) **must** be in the ON position.

15200045

The CHECK ENGINE and STOP ENGINE lamps flash if there are any fault codes to display.

If there are no fault codes to display, the CHECK ENGINE and STOP ENGINE lamps will remain lit.

15200046

If there are fault codes to be displayed, the check engine lamp will flash momentarily. Then the stop engine lamp will flash the first, second, and third digits of the fault code.

Example:

- **Fault Code 432**
- 4 flashes, pause
- 3 flashes, pause
- 2 flashes

Note : The check engine lamp will flash between each fault code.

The pattern repeats itself until the fault is cleared or the switch is turned off.

15200047

To view the next fault code, press the RPM $\pm$ switch (4) in the plus (+) direction.

To view the previous fault code, press the RPM $\pm$ switch (4) in the minus (-) direction.

15200048

The audible alarm (8) sounds anytime the warning or caution symbols are illuminated.

13200066

The alarm silence button (6) will temporarily silence the audible alarm.

Note : The alarm will be silenced for up to 2 minutes. As long as the fault condition exists, the alarm will "chirp" every 2 minutes to remind the operator that a fault exists.

13200066

The alarm silence button (6) is also used to test the warning and caution symbol lamps (1) and the gauges.

To test the gauges and symbol lamps, press the alarm silence button (6) while turning on the keyswitch. The alarm will come on for 5 seconds and for 25 seconds all symbols will illuminate and the gauge needles will move from the lowest position to the highest position and back to the lowest position.

Note : The voltmeter will not display a system test.

Engine Monitoring System

General Information

The indicator symbols (1) provide additional information on the type of fault that the ECM has detected. The individual symbols will flash during a fault condition.

Note : Pressing the alarm cancel button (6) when the keyswitch is turned on will illuminate the symbols for a self-test.

Low Engine Oil Pressure

The low engine oil pressure lamp (7) comes on when the engine oil pressure is below specification. Use the following procedure for lubricating oil specifications. Refer to Procedure 018-017 in Section V.

(</qs3/pubsys2/xml/en/procedures/41/41-018-017-om-mar.html>)

High Intake Manifold Temperature

The high intake manifold temperature lamp (1) comes on when the intake manifold temperature is above specification.

High Engine Oil Temperature

The high engine oil temperature lamp (2) comes on when the engine oil temperature is above specification.

Water in Fuel

The water-in-fuel lamp (3) interfaces with the optional water-in-fuel sensor in the primary fuel filter. It comes on when there is water in the fuel filter. This feature is **not** presently available.

High Coolant Temperature

The high coolant temperature lamp (4) comes on when the engine coolant temperature is above specification.

Low Coolant Level

The low coolant level lamp (5) comes on when the coolant level is below specification. Use the following procedure for the coolant specifications. Refer to Procedure 018-018 in Section V. (</qs3/pubsys2/xml/en/procedures/41/41-018-018-om-mar.html>)

Low Battery Voltage

Note : This voltage lamp **only** applies to marine applications.

The low battery voltage lamp (6) comes on when the battery voltage is below specification.
