

Fault Code: 297 (INDUSTRIAL)

OEM Pressure Sensor Circuit

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 297 PID(P): S223 SPN: 1084 FMI: 3/3 Lamp: Yellow SRT:	High voltage detected at the OEM pressure sensor signal pin.	No engine protection for OEM pressure.

OEM Pressure Sensor Circuit

Circuit Description

The OEM sensor signal is used by the ECM to monitor the OEM pressure. The OEM pressure is used by the ECM for the engine protection system. A sensor that has failed high can be caused by an open circuit in the signal or return wire, a voltage short in the signal or return wire, or a faulty sensor.

Component Location

The location varies with the OEM. Refer to the OEM troubleshooting and repair manual.

Shoptalk

The sensor voltage signal is supplied by the ECM on pin 18 of the sensor harness connector.

Refer to Troubleshooting Fault Code t05-297 (</qs3/pubsys2/xml/en/procedures/82/82-t05-297.html>)
