

Fault Code: 529 (INDUSTRIAL)

Switched Output B Error

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 529 PID(P): S51 SPN: 703 FMI: 3/3 Lamp: Yellow SRT:	Less than + 17 VDC detected at the switched output B signal pin at the electronic control module (ECM).	No action taken by the ECM.

Switched Output B Circuit

Circuit Description

The solenoid driver will control engine and vehicle functions by closing or opening a switched solenoid output, based on 11 selected engine parameters. The solenoid output will control functions such as a fan clutch, intake grid heater, air cleaner restriction indicator, or an oil filter differential pressure indicator.

Component Location

The solenoid driver is an OEM device, and the location of the solenoid is dependent upon the OEM.

Refer to Troubleshooting Fault Code t05-529 (</qs3/pubsys2/xml/en/procedures/82/82-t05-529.html>)
