

Fault Code: 2266

Electric Lift Pump for Engine Fuel Supply Circuit - Voltage Below Normal or Shorted to Low Source

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 2266 PID(P): 73 SPN: 1075 FMI: 4 Lamp: Amber SRT:	Electric Lift Pump for Engine Fuel Supply Circuit - Voltage Below Normal or Shorted to Low Source. Low signal voltage or open detected at the fuel lift pump circuit.	Engine can be difficult to start.

Electric Lift Pump for Engine Fuel Supply Circuit

Circuit Description

The circuit is a 24 volt high side driver in the ECM that controls the electric lift pump relay for engine fuel supply. The lift pump is grounded in the ECM and runs at 100-percent duty cycle for approximately 30 seconds following key-on. The lift pump also runs during start-up and while the engine is running.

Component Location

The electric lift pump is normally located on the right bank rear high position or on the left bank front high position.

Shoptalk

This fault code becomes active if the ECM detects a short circuit to ground or high current in the electric lift pump circuit. Causes for this fault code are a short circuit to ground or low resistance (relay partially shorted).

Refer to Troubleshooting Fault Code t05-2266 (</qs3/pubsys2/xml/en/procedures/87/87-t05-2266.html>)
