

Fault Code: 346

Electronic Control Module (ECM) Power-down Error

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 346 PID(P): S253 SPN: 630 FMI: 12 Lamp: Yellow SRT:	ECM power-down internal data store error.	Power-down data (which include maintenance monitoring, present ECM and engine delta times, past fault data) are lost.

Battery Power and Ground Circuit

Circuit Description

The ECM is a computer that is responsible for engine control, diagnostics, and user features.

Component Location

An ECM is located on both sides of the engine in front of the fuel pump.

Shoptalk

- This is a fault with the internal memory of the ECM. This fault can be caused by a power interruption to the ECM or a loss of battery power.
- An OEM master disconnect switch can cause this fault if the operator is using the master disconnect to shut the machine off or if the operator is **not** waiting 30 seconds from key-off until turning the master disconnect switch off. The ECM **must** go through an internal shutdown sequence before unswitched battery power is removed.

Refer to Troubleshooting Fault Code t05-346 (</qs3/pubsys2/xml/en/procedures/87/87-t05-346.html>)
