General Information

⚠ WARNING ⚠

Batteries can emit explosive gas. To reduce the possibility of personal injury, always ventilate the compartment before servicing the batteries. To reduce the possibility of arcing, remove the battery (-) negative cable first and attach the battery negative cable last.

There are many types of batteries with varying technology. Common battery types include:

- Standard lead acid (also called flooded or wet cell)
 - Starting
 - Deep cycle
 - Serviceable or maintenance free
- Maintenance free absorbent glass mat (AGM)
- Maintenance free gel cell

Check Original Equipment Manufacturer (OEM) or battery supplier service literature for battery removal and installation, maintenance, inspection, and testing requirements.
