Description

ISX Engine Brake Breakout Cable Kit

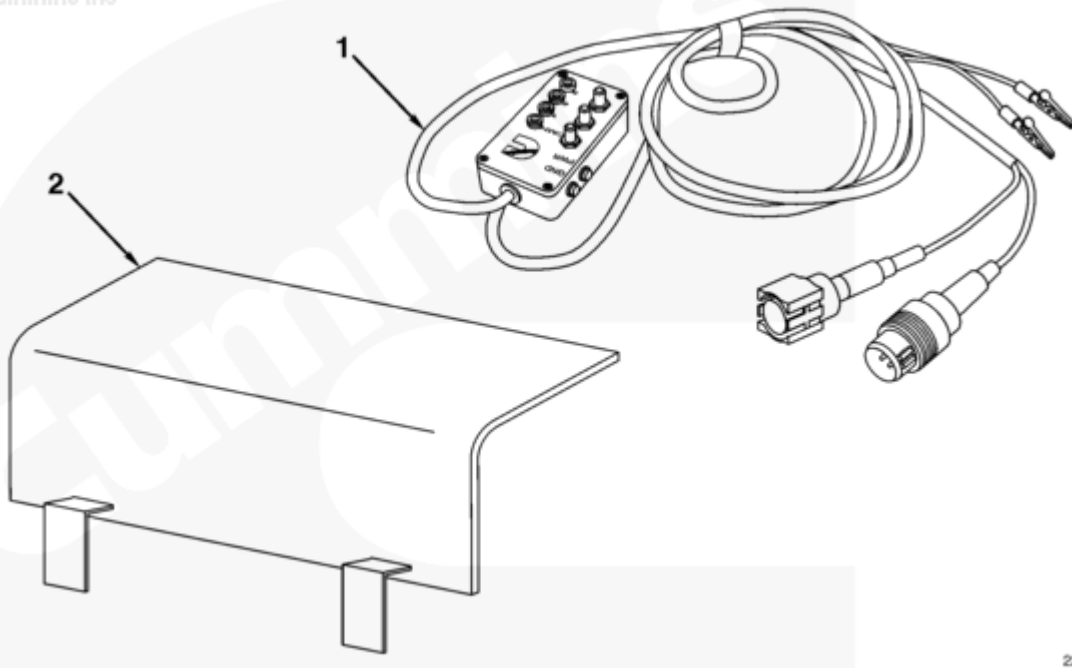

Purpose

This document provides information for using engine brake breakout cable kit, Part Number 3163150. The breakout cable is installed in series with the existing wiring harness to troubleshoot (resistance, voltage, and continuity test) the brake system on ISX engines.

The engine oil splash shield is used when the valve cover is removed. It will protect the user from oil splash from the fuel pump drive gear during testing.

Some engines have two engine brake solenoids and others have three. Refer to Procedure 020-004 (/qs3/pubsys2/xml/en/procedures/10/10-020-004.html) in the Troubleshooting and Repair Manual Signature, ISX, and QSX15 Engines, Bulletin 3666239.
