ISX and QSX Engines Crankshaft and Rear Seal Compatibility and Part Number Change

ISX and QSX Engines Crankshaft and Rear Seal Compatibility and Part Number Change

Warranty Statement

The information in this document has no effect on present warranty coverage or repair practices, nor does it authorize TRP or Campaign actions.

Contents

The purpose of this document is to notify the field of new crankshaft and oil seal part numbers for all ISX15 and QSX15 engines.

The crankshaft flange design has been modified to prevent the rear oil seal, used in dry clutch applications, from sitting on a machined step of the crankshaft flange. The change to the location of this step resulted in the need to change the step location on the rear oil seal used in wet clutch applications.

The new rear oil seal for wet clutch applications, Part Number 4319020, can be used with both the new and old crankshaft part numbers. The remaining stock of the old rear oil seal, Part Number 3103621, can **only** be used with the old crankshaft assembly, Part Number 4925762.

The new part numbers obsolete and supersede the previous crankshaft, and oil seal as shown in the Table 1 below.

The new oil seal was implemented on 31-Mar-2014 with the engine serial number (ESN) first of 79731533.

The new crankshaft was implemented on 11-Aug-2014 with the ESN first of 79764856.

Table 1. Crankshaft and Rear Oil Seal Part Numbers

New Part Number	Obsolete Part Number	Description
4330732	4925762	Crankshaft, Engine
4319020	3103621	Seal, Oil
