Fuel Pump Low Pressure Fuel Supply Tube Malfunction

Fuel Pump Low Pressure Fuel Supply Tube Malfunction

Warranty Statement

The information in this document has no effect on present warranty coverage or repair practices, nor does it authorize TRP or Campaign actions.

Contents

Product Affected

- ISX15 CM2350 X101
- QSX15 CM2350 X105
- QSX15 CM2350 X106
- QSX15 CM2350 X118
- X15 CM2350 X114B

Issue

Symptom:

- External fuel leak
- Engine stalls or engine shuts down

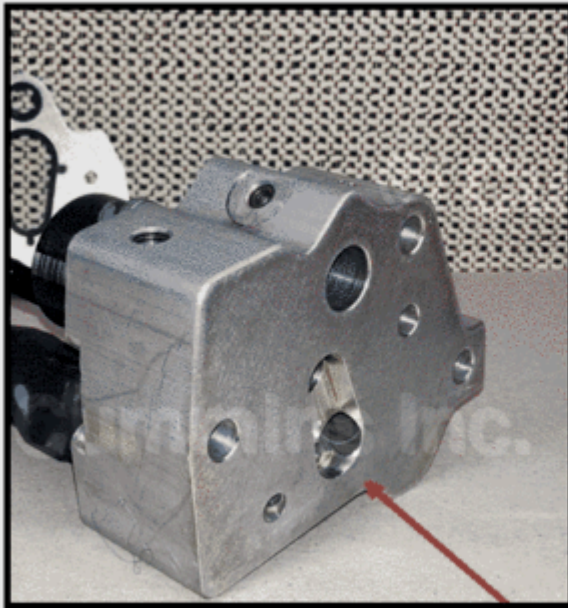

Root Cause:

- Fuel pump actuator housing air bleed screen contaminated with debris.
- Debris accumulation prevents fuel flow to drain. Low-pressure fuel system temperature increases. See Figure 1 below.

Resolution

If damage to low pressure fuel supply tube is found:

- Identify fuel supply tube configuration installed. See Steel Fuel Supply Tube Installation Instructions 5414654.
- Replace malfunctioning low pressure fuel supply tube with newly released steel fuel supply tube. See Steel Fuel Supply Tube Installation Instructions 5414654.
- Identify plugging in fuel pump actuator housing. Perform the High-Pressure Fuel Pump Return Flow Test. See corresponding Service Manual. Reference Procedure 005-236 in Section 5.
- If fuel pump return flow collected is less than 150 ml/cc in 30 seconds, the fuel pump actuator housing and fuel pump actuator has malfunctioned and **must** be replaced.
