American Petroleum Institute (API) Categories CL-4 and FB-4 Diesel Engine Oil
Introduction

American Petroleum Institute (API) Categories CL-4 and FB-4 Diesel Engine Oil Introduction

This document announces the release of two new American Petroleum Institute (API) diesel engine oil categories. These engine lubricating oils are designed for use in on-highway and off-highway applications using ultra-low sulfur diesel (ULSD) fuel.

- Proposed Category 12 (PC-12) was requested by the Truck and Engine Manufacturer's Association (EMA) in 2021 to support the following objectives:
 - Aftertreatment performance
 - Continued improvements in oxidation stability
 - Potential for lower viscosity grades
 - Continued improvements to wear performance
- After several years of industry efforts under the PC-12 program, the resulting API CL-4 and FB-4 engine lubricating oil categories will be released on 01 January 2027.
 - API category CL-4 engine lubricating oils include all the typical viscosity grades of API CK-4 engine lubricating oils. CL-4 is backward compatible with CK-4 and other past "C" engine lubricating oil categories.
 - API category FB-4 engine lubricating oils include the same performance improvements as CL-4 oils but may provide increased fuel economy (dependent on duty cycle) by lowering high temperature high shear (HTHS) viscosity. FB-4 engine lubricating oils will be available primarily in 10W-30 and 5W-30 viscosity grades. FB-4 will also include xW-20 viscosity grades, which are **not** permitted for use in Cummins® engines.
 - xW-30 FB-4 engine lubricating oils are backwards compatible to xW-30 FA-4 engine lubricating oils.
 - xW-20 FB-4 engine lubricating oils are **not** backwards compatible to xW-30.
 - FA-4 engine lubricating oils and are **not** allowed in Cummins® engines.
 - Refer to the API donut on the engine lubricating oil container to identify FB-4 engine lubricating oils. See examples below.

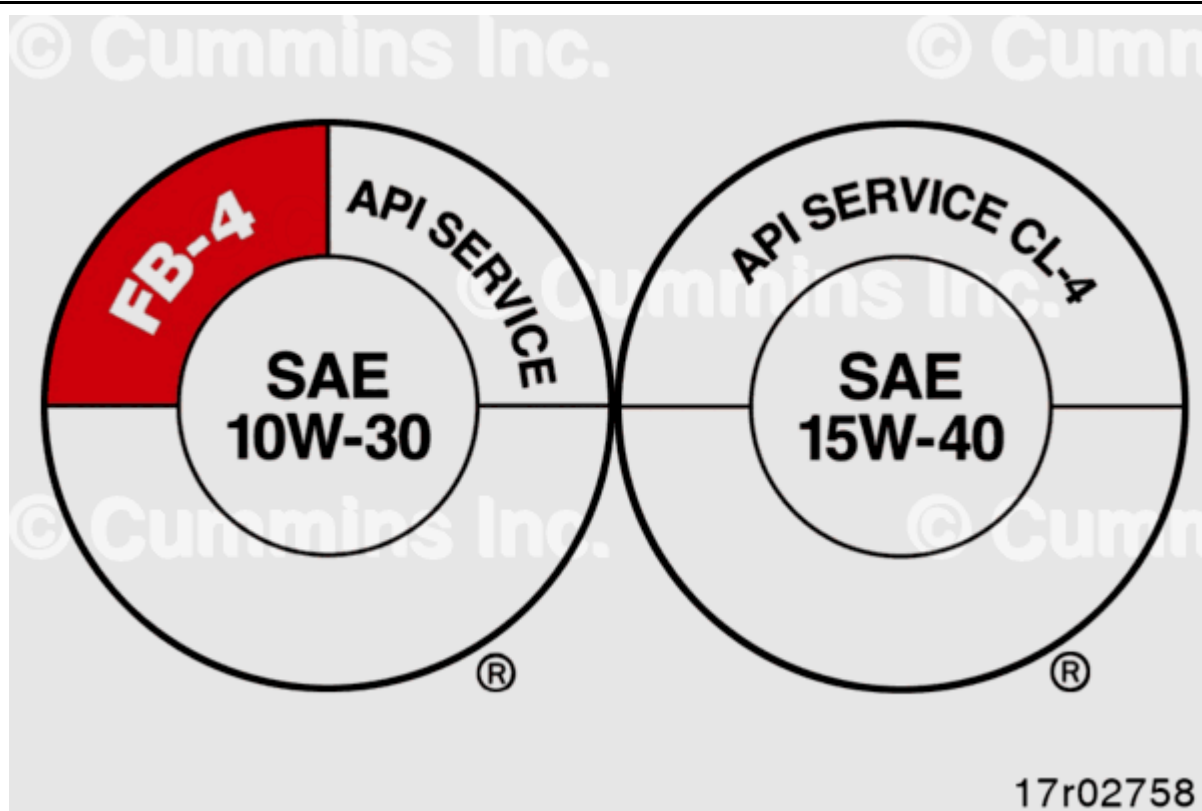

Figure 1, API Donut on Engine Lubricating Oil Containers

Cummins Engineering Standards (CES)

The API engine lubricating oil category, or any international engine lubricating oil certification, is **not** sufficient by itself to select the appropriate engine oil for a Cummins® engine. Please refer to the “Lubricating Oil Recommendations and Specifications” procedure in Section V of the corresponding owners/operation and maintenance manual. Engine lubricating oils should be selected that meet the appropriate Cummins® Engineering Standard (CES) and viscosity grade identified in the above procedure.

Table 1 below provides a comparison between CESs and other engine lubricating oil regulatory classifications for reference **only**. A list of engine lubricating oils that meet the appropriate CES for your engine can be obtained from your local Cummins® distributor or can be found on QuickServe Online at:

https://quickserv.cummins.com/qs3/qsol/service/serviceproducts/oil_registration.html

CES 20112 is recommended for use anywhere CES 20086 was previously recommended. CES 20113 is recommended for use anywhere CES 20087 was previously recommended. Use of engine lubricating oils meeting these specifications requires engines to operate on ULSD fuel.

If you are currently performing routine engine lubricating oil analysis you may notice a change in the engine lubricating oil chemistry, but we do **not** anticipate any significant issues with mixing CES 20112 and CES 20086 engine lubricating oils or mixing CES 20113 and CES 20087 engine lubricating oils. However, engine lubricating oils should ideally **not** be mixed across C and F categories.

Table 1, CES Comparison to Other Engine lubricating Oil Regulatory Classifications		
CES	Closest API Category	Closest International Classification
CES 20081	CJ-4	ACEA E9 or JAMA DH-2
CES 20086	CK-4	ACEA E11
CES 20087	FA-4	ACEA F11
CES 20112	CL-4	None
CES 20113	FB-4	None

Table 2, Recommendations and Specifications				
Manual Type	Bulletin	Procedure Title	Procedure	Section
Fluids for Cummins® Products Service Manual	5411406	Engine Oil Classifications	378-003	4
		Diesel Engine Oil Requirements	378-005	4
Operation and Maintenance Manual	Various	Lubricating Oil Recommendations and Specifications	018-003	V
