Obsolete Lift Pump Gaskets

## Obsolete Lift Pump Gaskets

### Warranty Statement

The information in this document has no effect on present warranty coverage or repair practices, nor does it authorize TRP or Campaign actions.

### Contents

This Technical Service Bulletin announces the obsolescence of lift/priming pump gaskets, Part Numbers 4928511 and 4928512.

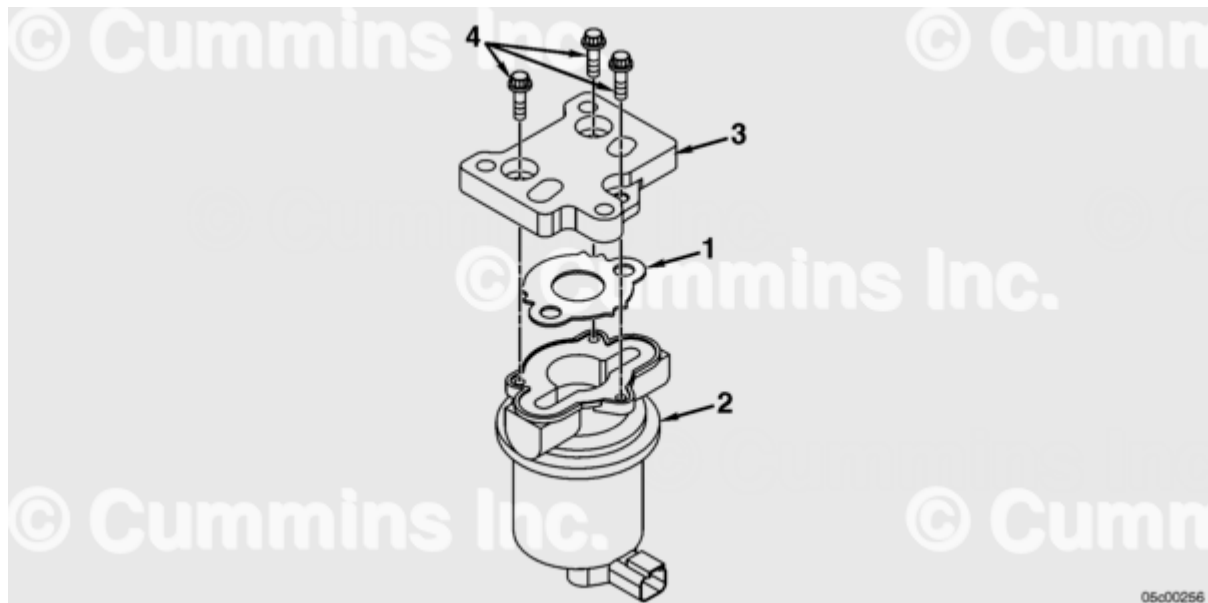

Figure 1, Fuel Transfer Pump Assembly - (1) Gasket, (2) Fuel Transfer Pump, (3) Mounting Support, 4) Capscrew

The ISX transfer pump assemblies consist of a fuel transfer pump and a mounting support. See Figure 1.

Lift pump gaskets, Part Numbers 4928511 and 4928512, introduced in SPT 05T5-27 have been discontinued and will no longer be available after present inventory is depleted; therefore, it will be necessary to replace the entire lift pump assembly. Present production and service lift/priming pumps contain a number of revisions to improve quality and durability. The supply and discharge port locations have been changed. The gasket material has been updated to a more robust

material and self-tapping capscrews are used to mount the pump to the support. These changes were made to reduce fuel leakage. Present lift/priming pump part numbers and a cross reference can be found below and in SPT 08T5-13, ISX Transfer Pump Obsolete without Supersession.

The release date for the revised lift/priming pump for service is 17 January 2008.

The engine serial number (ESN) first is 79290014.

The mounting support design can vary from the one shown in Figure 1.

| Old Transfer Pump Part Number | New Transfer Pump Part Number |
|-------------------------------|-------------------------------|
| 3949085                       | 4935005                       |
| 3949086                       | 4935006                       |
| 3949093                       | 4935007                       |
| 4088507                       | 4935092                       |
