Circuit Description

nonapplicable for this fault code

Component Location

nonapplicable for this fault code

Shoptalk

Perform standard oil change maintenance. The fault code can be cleared with the service tool during the maintenance procedure. Manually clearing the fault code can be accomplished through the accelerator pedal on applications with an accelerator pedal, or through the diagnostic switch on installations without an accelerator pedal.

The following procedure **must** be completed in 20 seconds or less. If the fault code is cleared successfully, the maintenance lamp will respond with a series of flashes. If the procedure is unsuccessful, turn the keyswitch to the OFF position and restart the procedure.

With the accelerator pedal:

- Turn the keyswitch ON, the diagnostic switch ON, and the engine OFF.
- Depress the accelerator pedal 100 percent for a minimum of 3 seconds and then release.
- Depress the accelerator pedal 100 percent briefly two more times and release.
- Depress the accelerator pedal 100 percent once more for a minimum of 3 seconds and release.

With the diagnostic switch only:

- Turn the keyswitch ON and the engine OFF.
- Turn the diagnostic switch ON for a minimum of 3 seconds and then turn it OFF.
- Turn the diagnostic switch ON briefly two more times and then OFF.
- Turn the diagnostic switch ON once more for a minimum of 3 seconds and then OFF.
