

Fault Code: 1329

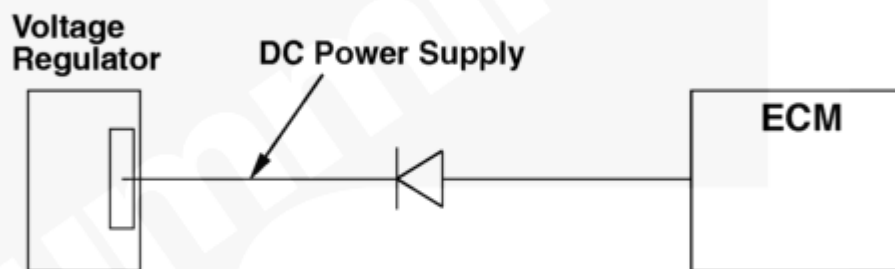

Voltage Regulator

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 1329 PID(P): SPN: FMI: Lamp: Warning SRT:	The voltage regulator has lost its DC power supply.	The voltage regulator will not be able to regulate generator set output voltage. Possible low AC voltage (Fault Code 1447) condition can occur.

Voltage Regulator Circuit

Circuit Description

The ECM uses this fault code to inform the operator that the base board can **not** drive DC power to the voltage regulator.

Component Location

Refer to Section E for location of the voltage regulator.

Shoptalk

The possible failure modes are open circuit, short circuit, short to ground, internal shorts to the voltage regulator or base board, or bad diode.

Refer to Troubleshooting Fault Code t05-1329 (</qs3/pubsys2/xml/en/procedures/01/01-t05-1329.html>)
