Generator Set ECM Card Cage

Circuit Description

This fault code is used by the ECM to tell the operator that the base board software version does not correspond to the version of software loaded into the extended I/O board.

Component Location

Refer to section E for location of the ECM card cage, the base board, and the extended I/O board.

Shoptalk

The possible failure modes are incorrect installation of the base board or extended I/O board, and loading an incorrect software calibration into the ECM.

Refer to Troubleshooting Fault Code t05-1474 (</qs3/pubsys2/xml/en/procedures/01/01-t05-1474.html>)
