

Fault Code: 1495

Common Shutdown Output Relay Driver Diagnostic

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 1495 PID(P): SPN: FMI: Lamp: Warning SRT:	The Common Shutdown output relay driver diagnostic has detected an error.	Any customer features dependent on Common Shutdown output will not function correctly. No action taken by ECM. No loss of performance.

Common Shutdown Output Relay Driver Circuit

Circuit Description

The ECM checks the common shutdown output relay driver to ensure correct operation. The ECM uses common shutdown output to inform any customer/features dependent on the ECM for knowledge of a critical fault with the generator set. The ECM monitors the voltage (no voltage increase will trip Fault Code 1495) caused by short circuits, open circuits, or failed common shutdown output relay driver in the ECM.

Component Location

Refer to section E for location of the output for the common shutdown.

Shoptalk

Possible failure modes are open circuits, short circuits, short to ground, and loss of supply voltage inside the ECM.

Refer to Troubleshooting Fault Code t05-1495 (</qs3/pubsys2/xml/en/procedures/01/01-t05-1495.html>)
