

Fault Code: 263

Fuel Temperature Sensor Circuit - Shorted to High Source

 Printable Version

Overview

Codes	Reason	Effect
Fault Code: 263 PID(P): SPN: FMI: Lamp: Warning SRT:	Engine fuel temperature sensor signal is shorted high.	No engine protection for fuel temperature. No effect on performance.

Fuel Temperature Sensor Circuit

Circuit Description

The fuel temperature sensor is used by the electronic control module (ECM) to monitor the temperature of the fuel. The fuel temperature is used by the ECM for the engine protection system, timing, and fueling control. If the voltage is high, the ECM will log Fault Code 263. High voltage can be caused by opens in the signal or return wires, voltage shorts to the signal or return wires, or a failed open sensor.

Component Location

Use the following procedure for a detailed component location view. Refer to Procedure 100-002 in Section E. (</qs3/pubsys2/xml/en/procedures/01/01-100-002-tr.html>)

Shoptalk

The resistance of the sensor varies with the temperature.

Refer to Troubleshooting Fault Code t05-263. (</qs3/pubsys2/xml/en/procedures/01/01-t05-263.html>)
