Inspect

These checks **must** be made with the engine at idle.

Check the operating indicator daily for the following:

- The operating indicator rotates in a **clockwise** manner.
- The number of minutes for one revolution is **not** more than 1 minute above the “deltaT”-reference, or the number of minutes for one revolution measured after the last major maintenance procedure, or initial 100 hour measurement.
- If the operating indicator value is higher than stated, refer to Section TS.
