⚠ WARNING ⚠

Carefully cut open the upper section of the combination filter. The filter element spring is under compression and can cause personal injury.

Use filter cutter, Part Number 3376579, to open the upper section of the combination filter.

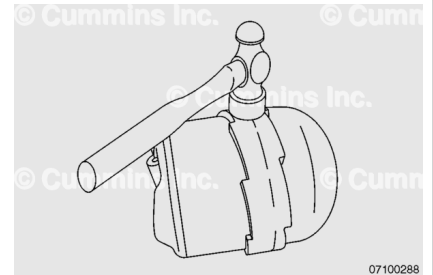

Remove the filter element from the can for inspection. Check for evidence of moisture or foreign particles.

Note : For more accurate inspection results of the filter element, excess oil must be pressed out of the filter media with a shop vise or similar.

Use a hammer to strike the cartridge around the spin weld in the center of the cartridge.

Carefully pull the two parts apart revealing the core and the sludge cake.
