Remove

Instrument Panel

Note : The remote panel ED3 instrument panel is **not** sold with a cabinet for mounting. This allows the ED3 instrument panel to be mounted in existing helm stations, bridge wing stations, etc.

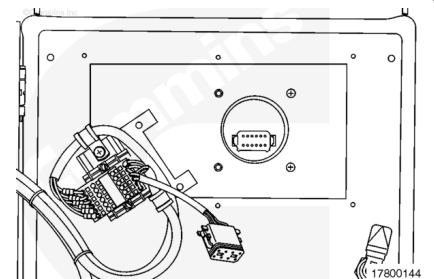

Gain access to the ED3 instrument panel.

Disconnect the connector from the back of the ED3 instrument panel.

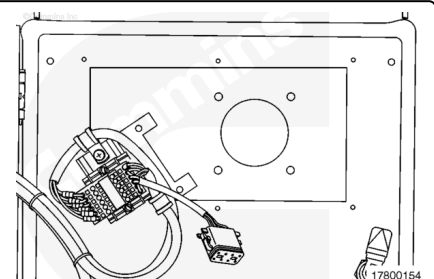

Remove the terminal strip bracket mounting screws.

Allow the terminal strip and bracket to hang free.

Remove the remaining ED3 instrument panel mounting screws.

Slide the ED3 instrument panel out of the front of the remote panel enclosure.

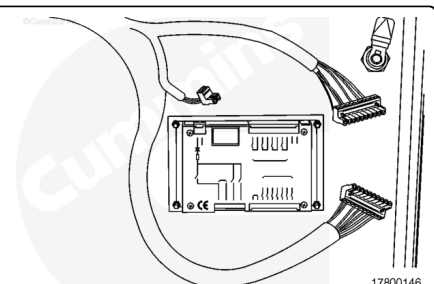

Control Indicator Panel

Note : The remote panel control panel is **not** sold with a cabinet for mounting. This allows the control panel to be mounted in existing helm stations, bridge wing stations, etc.

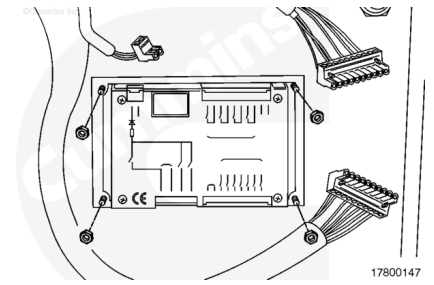

Gain access to the control panel.

Disconnect all connectors from the control panel.

Remove the mounting nuts.

Slide the control panel through the front of the engine room panel door.

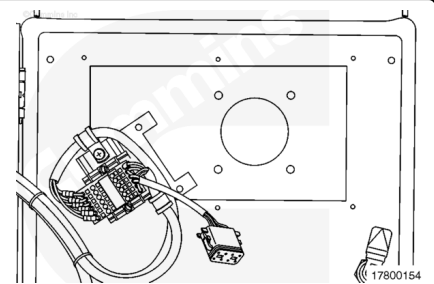

Install

Instrument Panel

Slide the ED3 instrument panel into the remote panel enclosure.

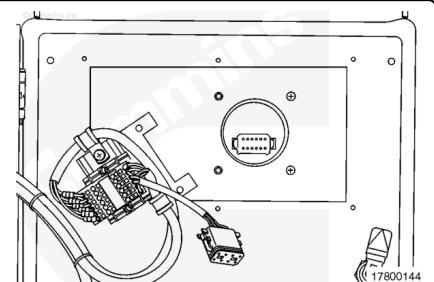

Thread the two non-bracket screws into the ED3 instrument panel.

Place the terminal strip and mounting bracket onto the remote panel enclosure.

Thread the two non-bracket mounting screws into the panel.

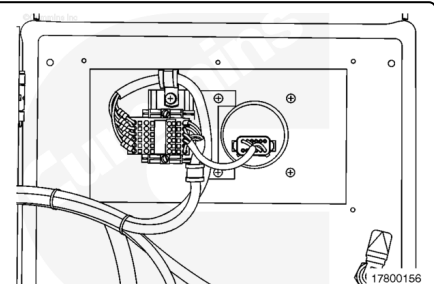

Tighten all four screws.

Position the bracket and thread in the capscrews.

Tighten all four capscrews.

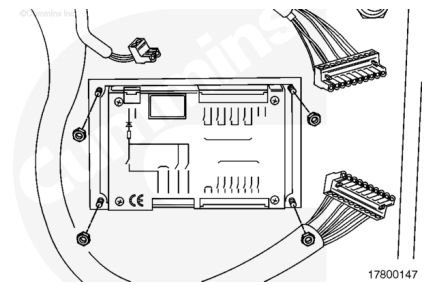

Connect the plug into the back of the ED3 instrument panel.

Control Indicator Panel

Slide the control panel through the front of the remote panel enclosure.

Install and tighten the mounting nuts.

Connect all connectors to the control panel.
