Description

Sensor Adapter

Purpose

This document provides information for Sensor Adapter, Part Number 4918864. The adapter is used on the oil pressure and temperature combination sensor on ISX engines which were manufactured from 1998 to 2002, without EGR. The adapter will create a clearance between the sensor probe and the oil gallery wall. This will prevent damage to the oil pressure and temperature sensor.

For additional information on the sensor adapter, refer to Procedure 019-155 (Oil Pressure/Temperature Sensor) Section 19 in the Troubleshooting and Repair Manual, Electronic Control System, Signature, ISX, and QSX15 Engines, Bulletin 3666259.
