Description

Injector Inspection Gauge

Purpose

This document provides information for Injector Inspection Gauge, Part Number 3375209. The gauge is used to check the assembled injectors for sticking plungers. With calibrated pressure on the plunger, the injector adapter is rotated. The amount of torque needed to turn the injector will indicate if the plunger is free in the bore.

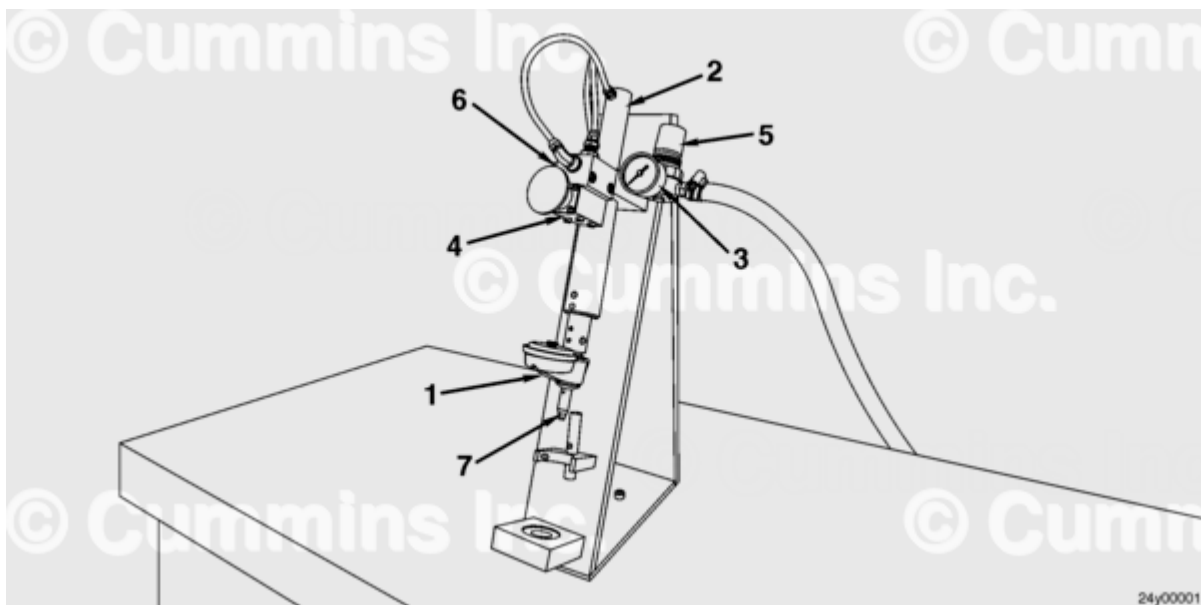

Figure 1: Injector Inspection Gauge, Part Number 3375209

Table 1, Injector Inspection Gauge, Part Number 3375209

Item Number	Part Number	Description	Quantity
1	3375247	Torque Wrench (96 in-oz)	1
2	3375248	Air Cylinder	1
3	3375249	Pressure Gauge (414 kPa [60 psi])	1
4	3375250	Air Actuator Valve	1
5	4918512	Air Pressure Regulator	1

Table 1, Injector Inspection Gauge, Part Number 3375209			
Item Number	Part Number	Description	Quantity
6	ST1141-3	Air Exhaust Muffler	1
7	3823266	Injector Plunger Ball	1

Note : Not included in this kit: Update Kit for 91N14, L10, and early M11, Part Number 3823860.

Operation

1. Connect the gauge to a shop air supply of at least 207 kPa [30 psi].
2. Place the assembled injector in the gauge with the cup in the lower bearing.
3. Loosen the set screws on the torque wrench stem. Set the torque wrench plunger cone 25.4 mm [1 in] above the injector plunger surface. Tighten the setscrews on the torque wrench.
4. Actuate the air cylinder and adjust the pressure regulator to 207 ± 14 kPa [30 ± 2 psi].
5. Rotate the injector adapter and observe the reading. Refer to Figure 2.

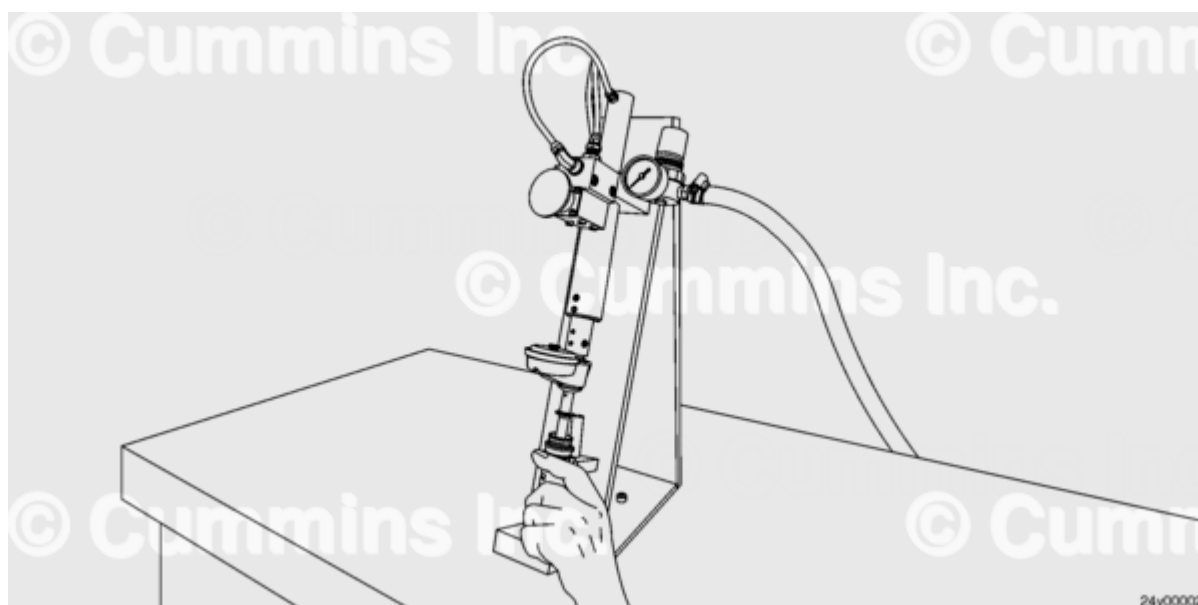

Figure 2: Move injector and observe the reading

If the reading is greater than 0.226 N·m [2 in-lb] (32 ozf-in), remove the injector. Use injector fixtures, Part Number ST1298 or 3375084, to loosen and tighten the retainer to the specifications shown in PT Injector Rebuild Manual, Bulletin 3379071.

Repeat the check of the assembled injector for a sticking plunger with the injector inspection gauge, Part Number 3375209.

Maintenance

- Keep the gauge in a clean dry place. Wipe occasionally with a lightly oiled cloth.
